DETAILED ACTION

1. This office action is responsive to application filed on 07/16/2003. The claims 1-59, 87-97,99,100 are pending and subjected for restriction/election. Claims 60-86, 98 are canceled.

Upon a request from Joseph Price on 03/08/2006, this restriction election is created as follow.

RESTRICTION ELECTION

This application contains claims directed to the following patentably distinct species of the claimed invention:

Group I, independent claims 1,87,94 draw to determining means for determining a component order in an ascending order of impedance of passive components amongst components to be placed on the printed wiring board; and placement means for placing the passive components in the determined component order.

Group II, independent claims 23,90,97 draw to first determining means for determining a pin order in order of seriousness of noise that can occur in a current that flows through a power pin, for a power pin of each of the components belonging to the first type of components, second determining means for determining a component order in ascending order of impedance for each component belonging to the second type of components; and assigning means for assigning a second type component which is highest amongst the components in the component order that are not assigned, to a first type component having a power pin which is highest amongst the power pins in the pin priority that are not assigned.

Group III, independent claims 91-93,99,100 draw to a position information storage step for storing a set of position information which is made up of information showing a position on a wiring board of (a) a position dependent component, or a pin thereof, and (b) one or more effected components, or pins thereof, which are potentially effected by the position dependent component, a retrieval step for retrieving

from the position dependent component or the pin thereof, based on the sets of position information stored in the position information storage step, for each effected component or the pins thereof, whether the effected component or the pin thereof is within a predetermined distance from the placement dependent component or the pin thereof, or for retrieving a predetermined number of effected components or pins thereof in a predetermined order; and a relationship information storage step for storing the effected component or the pin of the effected component retrieved in the retrieval step in relation with the position dependent component or the pin thereof from which the retrieval was performed, as relationship information.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
